

Protect Yourself From Phishing

Be Skeptical: Don't trust unsolicited requests for personal info via email, text, or call.

Never Open Unexpected Attachments: Don't open attachments especially those that ask for credentials or personal information to open the attachment.

Verify Independently: If an email seems real, don't click links; go to the company's official site or call a known number.

Use Strong Security: Enable MFA (authenticator apps are best) and use unique, strong passwords.

Spot Scams: Watch for pressure to act immediately, unusual payment requests (gift cards, wire transfers), or links that look off. Hover over to check a URL's destination without clicking on it.

If Scammed: Change passwords, report to ProtectTheGoodLife.Nebraska.gov and contact financial institutions.
